

Workforce shortages and rising costs  
are fueling the call for care  
model innovation

**90%**

of nurses reported  
they were considering  
leaving the profession

**\$46,100**

Average cost of turnover  
for a bedside RN

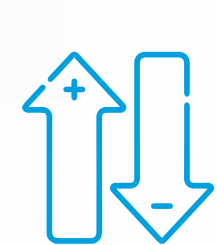

**\$262,300**

Average additional costs or savings  
for each % change in RN turnover

**To overcome these challenges, hospitals are adopting hybrid care models<sup>7</sup>  
that bring virtual nursing workflows into bedside care**

**Benefits of  
Virtual Nursing**

Improves staff balancing and labor costs

Supports nurse recruitment and retention

Drives workflow efficiency

Enhances patient coverage and safety

Accelerates the speed of clinical intervention

Minimizes variation in patient care

### Virtual Nursing Workflows

Tele-Monitoring

New Admissions

Discharges

Medication  
Second Signature

Tele-Mentoring  
and Precepting

Tele-Rounding  
and Consults

Tele-Rapid  
Response

Tele-Sitting

Research shows that hybrid  
models like virtual nursing  
boost patient experience  
and contribute to more  
rapid recovery

## HOW TO GET STARTED WITH VIRTUAL NURSING

Download the white paper “A Guide to  
Virtual Nursing in Inpatient Settings” to  
learn more about roles, KPIs, and IT  
enablement considerations to support  
your virtual nursing strategy.
